

Question	Yes		No		Attended Professional Preparedness Workshops		Learned about career opportunities through ARH		None of the above		Received advice on resume and/or		Received information about job openings	
Did you work in the architecture profession while in the architecture program (full time, part time, contract, freelance)?	70%	7	30%	3										
Do you have a job lined up after graduation related to the architecture profession?	60%	6	40%	4										
What kind of support did you receive for your job search? (Please choose all that apply.)					16%	3	11%	2	11%	2	37%	7	26%	5

Question	Response	Date
Did you work in the architecture profession while in the architecture program (full time, part time, contract, freelance)?	Design Build Construction at Equity Builders Inc. and at ASarchitecture	May 2022
	Ethen Wood Designs in San Francisco, As Architecture in Oakland, and Eric Miller Architects in Monterey	December 2021
	Freelance	May 2022
	I was a part time architecture intern at As Architecture, Inc during my last year of the program.	December 2021
	KCBA Architects, Hatfield PA - Full time	May 2022
	No. It was prohibited by Korea Institute of Registered Architects, that I study abroad and work at the same time even though I'm in South Korea right now.	December 2021
Do you have a job lined up after graduation related to the architecture profession?	RH (formerly Restoration Hardware), FT in summer, PT in fall / spring (Architecture Intern - promoted to Architectural Design Assistant)	May 2022
	Either with Flad Architects or continuing my career at Eric miller Architects in Monterey	December 2021
	Eric Miller Architects in Monterey Bay as a Drafter / Designer	May 2022
	I will keep working at the same firm where I was interning - As Architecture, Inc.	December 2021
	KCBA Architects	May 2022
I accommodate accessibility and life safety requirements in the design of a building.	RH (formerly Restoration Hardware), Architecture Intern - promoted to Architectural Design Assistant	May 2022
	Since I have been working, my research in codes & regulations has also helped inform / guide my projects.	May 2022
I articulate and extend conceptual thinking through diagrams.	I prepared a few pages of diagrams of what the market cultures meant to our ethnicity, how the spaces were organized and transformed. On the other hand, the sustainable strategy and materials usage was my diagrams' weak points. It was imbalanced.	December 2021
I clearly explain and defend design projects in verbal presentations.	The main role of each structure was clearly expressed through the verbal presentation.	December 2021
I communicate conceptual thinking verbally and in writing.	I'm a very communicative and emotive person. I also like to draw things out.	May 2022
	The final conceptual thinking conveys what I've been establishing throughout the semester. The most friendly structure and culture that had been diminished during urbanization got revitalized to function as lubrication.	December 2021
I conduct a user & programmatic analysis.	The renderings and thesis cover inclusive user groups. The zoning diagram indicates how the programs within the project respond to the current city's identity.	December 2021
I create presentation boards, slides, and/or printed materials which exhibit logical sequencing and a hierarchy of information.	All pages of the presentation were drawn digitally, but all pages and images exhibit the logic and sequence.	December 2021
I demonstrate a commitment to community building and social equity through programming and organization of an architectural pro	The project's main purpose is to become a new vibrant cultural space. The project doesn't merely focus on one single group of citizens, but various groups, including children and older adults.	December 2021
I determine appropriate representation techniques to describe the spatial qualities and human experience of the design proposal	Every presentation I've done has been written out and rehearsed many times to ensure that the correct verbiage and pace is used.	May 2022
	I decided to tell a story rather than explain the whole structural system and concepts.	December 2021
I develop a design identity which synthesizes critical thought, architectural intent, and urban design strategies by developing	The design identity immanent within the project was quite simple. It was to reconnect the local identity to a newly established marketplace. The architectural intent that interacts with the heritage and its derivation.	December 2021
I develop a rigorous material logic for model-making to test ideas.	I have been tried to make a 3D model through the last month of the semester. The sketches I drew indicated the intention of the spatial concept predetermined by the concrete structures and raw materials.	December 2021
	I love model making especially with varying materials.	May 2022
I develop architectural proposals sensitive to the site context in scale and use based on research.	Although the material used was opposite to the design intention established through the semester, I still think that heavy and raw materials can be the answer. The strongest structural system and durable materials usually consist of reinforced concrete. I chose durability rather than eco-friendly materials.	December 2021
I develop criteria to generate and evaluate an architectural order and formal language.	A few of the architectural key concepts were verbally and visually presented.	December 2021
I develop effective visual communication strategies to convey information that build towards an argument.	The project was not merely intended to be a daytime program, but the night market that opens up to 1~2 am. The visual strategies were to show a different scenery of morning, afternoon, and night.	December 2021
I integrate structural systems into the design of a building.	I always pursue a multi-purpose, for example, a structure as skin and skin as a structure. The project doesn't have an ornament on its facade, but the structural arrangement function as an ornament.	December 2021
I produce architectural drawings with appropriate drawing conventions to convey spatial qualities and design intent.	I have produced strict drawings with column grids lines and other details; while I have also created more design like drawings with photoshop showing more of a design intent.	May 2022
	The key concepts on every floor clearly indicate its context as well as structural system.	December 2021
I produce critical analyses of contemporary, historical, global precedents inclusive of buildings, urban planning, theoretical	I've been covering up the macro-scale into a micro-scale. The contemporary and historical context of South Korea had narrated.	December 2021
I produce diagrams indicating critical analyses of relevant precedent buildings or the built	Precedent research has become one of my tools to use when stuck and am wondering	May 2022

of relevant precedent buildings or the built environment recognizing the signif	The precedents that I studied throughout the semester were not a building and are more about multi-purposed public space. It transformed into a new public place once it has to be a market. My project intends to respond to that culture and heritage. The diagrams I made for the project conveyed those concepts clearly.	December 2021
If there is anything else you would like us to know, please indicate below.	I miss the pre-covid B.Arch program, in Brannan, onsite. The environment of that building is what made me fall in love with architecture. With no dedicated spaces, building, or willingness to be onsite; that environment was lost in my last years (although they were still outstanding given the circumstances).	May 2022
	I think I showed my everything through the years. I'm about to work for an architecture firm in South Korea for the requirement of a licensed architect. Once I've been working as a construction and subcontractor manager at an interior construction company, I'm so excited to work in a new environment.	December 2021
	N/A	May 2022
To you, what is the most important skill and concept that you learned in this program?	I think the most important skill / concept learned through the program is how to meld my abstract, very conceptual models (or paintings, sketches, etc) into a built form that is safe and enjoyable for the users.	May 2022
	It gave me a resounding sense of purpose and responsibility to provide socially equitable spaces and opportunities.	December 2021
	That design is iterative. Continue to develop myself and the design until the it is exactly what it needs to be.	May 2022
	The most critical skill and concept are how I carved the thesis statement. The stunning facade, landscape, and interior view mean nothing without the solid thesis statement. I've learned the way of architectural thinking. For example, I've been sketching many pages without a solid thesis statement that defines the project's identity even though the previous concepts I've made were irrelevant to the current aspect of the project. They are more relevant to the time while I was getting clearer. After completing the clear thesis statement, all the scenery and programs automatically popped up.	December 2021
	The most important skill I learned in this program is synthesizing ideas in order to put together complex proposals. Also I learned in this program is finding the true meaning and reason to the end product and it's intent to not only serve users but the community as a whole	May 2022
	To me, the most important skill and concepts that I learned in this program are to deeply look at what the site gives us during the design and how to analyze and observe targeted user groups and their usage of the future building.	December 2021
	Transforming and initial idea or intent, into a feasible, built object. Not only buildings but cars, landscapes, machines, etc...	May 2022
	Working independently, translating conceptual ideas into physical models	June 2022
To you, what is the one item the program should improve? (please feel free to comment on any aspect of the program)	Creating more diagrams to represent my ideas.	May 2022
	Honestly, time management was my biggest challenge. I've been waiting for my turn for the desk crit. Although I'm currently living in South Korea and have 14 hours of time difference, I needed to manage my time as if I were living in California. Moreover, I was required to complete my task at the same time. And I would like to recommend an individual concept board.	December 2021
	I couldn't ask for a better experience, truly changed my life. I feel overly qualified to enter a firm and start my career.	December 2021
	I feel the program could improve on providing more courses that teach specific tools. I know architecture schools in South for their first year students most of the classes involve learning autocad and photoshop	May 2022
	I would have liked to learn more code earlier in the program and get more in depth in the later years. It would have helped the transition to work easier and I generally find it very interesting.	May 2022
	Support in 3d modeling / rendering. Support in Professional Practices.	May 2022
	There should be more one on one time for students in the thesis studios	June 2022
	To me, one item the program should improve would be a bit more usage of technology during the design. I think some explorations of computational design in some classes would be helpful during the design process.	December 2021
